

BUSINESS AND GENERAL AVIATION

Jet fuel microbial contamination can be extremely costly to aviation businesses. Identify and deal with the issue at earliest possible stage

TRIED. TESTED. TRUSTED.

FUELSTAT® provides simple rapid detection of microbial contamination in jet fuel with free digital app to verify results and capture data

Avoiding unscheduled Aircraft on Ground (AOG) can be very good for business and reputation

Traditionally, jet fuel testing methods have depended on fuel samples being sent to a specialist laboratory for analysis. The next step is a waiting period of up to 4-7 days, or longer to get the results.

Sending the fuel samples to the lab isn't simple. ASTM D6469 highlights that if a sample is to be tested for microbial contamination and cannot be tested on-site, it should be transported on ice and tested within 24hrs or the sample may no longer be a true representation of the environment from which it came. Delays may cause varying results which may cause an increased risk to your asset and require unscheduled AOG to remove the contamination.

- Why take the risk?...
- Why wait 4-7 days for a test report?

Applying an additive like biocide on a regular basis is another solution commonly used in aviation to prevent microbial contamination. The risk is that a fresh contamination starts before the next scheduled application of biocide and grows rapidly and that the contamination micro-organisms develop resistance from regular exposure to biocide, much as a human does with antibiotics.

- Is the cost and effort of applying additives regularly justified?
- Would fast on-site testing be a more efficient option?

**FUELSTAT® SOLUTION
TEST. RESULT. REPORT**

within 15 minutes

BA/GA FUEL MANAGEMENT

FUELSTAT® Microbial Contamination Detection: A modern solution for all aspects of managing fuel. All contamination can impact the quality of aviation jet fuel, microbial contamination is the most troublesome.

- Does your fuel contain dangerous levels of microbial contamination?
- FUELSTAT® can quickly help you find out!

FUELSTAT® uses antibody technology as against more traditional growth techniques. It works equally well testing fuel only as well as water in fuel, only searches for the markers of microbial contamination so risk of false high results are reduced, is simple with no previous experience in testing required, and very fast with results from start to finish in less than 15 minutes. It also comes with a free data capture app FUELSTAT® Result.

Tough markets demand efficient processes that are not always visible to clients

Customers demand instant availability, reliability, service, comfort at a fair and competitive price. Operators want the highest level of uptime, highest reputation and returning clients. Operators also want to protect their assets to maintain the highest value. Reducing the risk of fuel microbial contamination helps with both operational risks and structural risks from corrosion that can be influenced by microbiological growth in fuel tanks.

- FUELSTAT®, taking only a few moments of labour to complete and interpret, is very cost effective
- FUELSTAT® helps understand the condition of fuel tanks based on knowledge, not guesswork, helping reduce risk of unexpected downtime
- FUELSTAT® helps with decisions to only treat with additives when necessary, reducing cost, downtime and overuse considerations

CUSTOMER SATISFACTION

MICROBIAL CONTAMINATION IN JET FUEL

What is aviation fuel microbial contamination, why is it so costly and vital to identify?

Fuel microbial contamination is caused by microbes: tiny organisms such as bacteria, yeasts and fungi, which thrive wherever there is food and water. Aviation fuel systems are ideal habitats for these organisms. Not only are these systems often warm and humid, but they also provide food for microbes in the form of hydrocarbons that are in the fuel.

If these microbes (also known as 'bugs') are allowed to proliferate unchecked, they can block fuel filters and cause fuel gauging problems. In fact, they can even induce corrosion to such extent that they can damage the aircraft's tank structure.

- Blocked filters
- Fuel Quantity Indication Probes
- Corrosion and tank leakage

Solo Working: FUELSTAT® makes the new normal easier

1. Test kit comes complete in sealed pouch

2. Watch training videos on smartphone

3. Do test, wait 10 minutes and get results

4. Transmit result to anywhere in globe

THE SOLUTION IS AS SIMPLE AS 1-2-3

FUELSTAT® PLUS

- The ultra-simple test that just requires **4 drops** of sample
- **15 minutes** to result as opposed to 4-7 days!
- **'Test at the tank'** technology - no laboratory required
- No requirement for additional **equipment** or **sterility measures**

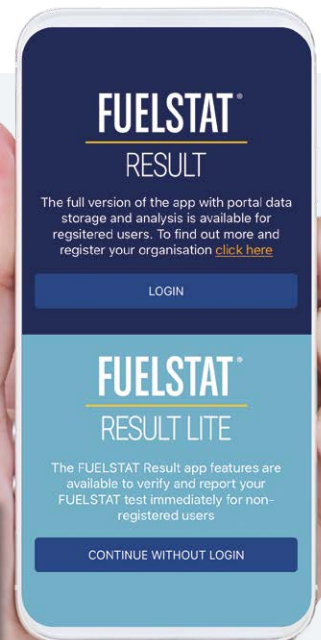

In critical times, you need a fast, convenient testing method - one that doesn't require multiple people to complete the process. Using FUELSTAT®, a single person can conduct tests at the tank after minimal training from our instructional videos. FUELSTAT® is based on immunoassay antibody tests. Just as a pregnancy test searches only for markers of human chorionic gonadotropin, FUELSTAT® only searches for the markers of bacteria and fungi that can grow in jet and diesel fuel and can potentially cause both operational downtime, corrosion and in worse case safety issues.

FUELSTAT® RESULT

- The easy to use app that gives **immediate visual verification** of result
- **Reduces risk** of misinterpretation
- No need for additional equipment other than a smartphone
- Fully **detailed report** can be instantly produced in PDF format

FUELSTAT® ANALYSIS REPORT		:ConidiaBioscience
This test for microbiological contamination was conducted on a fuel sample using the FUELSTAT® Plus test kit in accordance with ASTM D8070 and the results reported below were read using the FUELSTAT® Result app.		
TEST DATA		
Tester name: John Smith	Test date: 01-JAN-2021	
Location/Site: Location 1	Printout date: 01-JAN-2021	
Asset Identity: Asset 1	Phone make: OnePlus	
Tank Reference: Tank 1	Phone model #: ONEPLUS A6013	
GPS location: 51.41868 -0.56902	App version: 2.0.2	
FUELSTAT Test Lot #: B2101		
TEST RESULT CONTAMINATION ALERT LEVELS		NOTES
Bacteria: NEGLECTIBLE		A caution on the Negligible alert levels indicates that reading is getting close to the alert level for Moderate Contamination
Fungi: NEGLECTIBLE		
Hormoconis resiniae: NEGLECTIBLE (CAUTION)		
OVERALL RESULT: NEGLECTIBLE		
DISCLAIMER		RESULT LIMIT INDUSTRY GUIDELINES
FUELSTAT® Result is designed for use with tests which are fully compliant with ASTM D8070. However, readings obtained using FUELSTAT® Result are currently outside the scope of ASTM D8070. Operators should visually validate test results as per ASTM D8070. The accuracy of this report may be dependent on the accuracy of the sample provided. Full terms of use available on the website: www.conidia.com For any technical assistance telephone: +44 (0)1491 829102		Phase Target antigen limits Alert level
		Fuel Up to 150 µg/L NEGLECTIBLE
		Water Up to 33 µg/ml
		Fuel Between 150-750 µg/L MODERATE
		Water Between 33-166 µg/ml
		Fuel Greater than 750 µg/L HEAVY
		Water Greater than 166 µg/ml

TRIED. TESTED. TRUSTED.

FUELSTAT®

Who we are:

FUELSTAT® fuel tests are developed, manufactured and marketed by Conidia Bioscience Ltd. Based in UK, Conidia Bioscience was founded in the early 2000's by experts in immunoassay techniques and holds the internationally patented intellectual property for FUELSTAT®.

Where to find us:

FUELSTAT® is distributed globally by a network of specialist distributors covering the major sectors. To arrange for a distributor to support you simply contact info@conidia.com.

FUELSTAT® complies with ASTM D8070 and ASTM D6469 Standard Guide for Microbial Contamination in Fuels

FUELSTAT® is listed as a recommended product by IATA. Conidia Bioscience is a Strategic Partner with IATA
