

FUEL STORAGE & SUPPLY

On the spot testing for microbial contamination
is good for business and profits

TRIED. TESTED. TRUSTED.

FUELSTAT® provides rapid
detection of microbial
contamination in fuel

Is sending samples to a lab for microbial fuel tests worthwhile or economical?

Traditionally, fuel testing methods have depended on fuel samples being sent to a specialist laboratory for analysis. The next step is a waiting period of up to 4-7 days, or longer to get the results.

Sending the fuel samples to the lab isn't simple. ASTM D6469 highlights that if a sample is to be tested for microbial contamination and cannot be tested on-site, it should be transported on ice and tested within 24hrs or the sample may no longer be a true representation of the environment from which it came. Delays cause varying results which may cause an increased risk to you or your customer's asset.

- Why take the risk?...
- Why wait 4-7 days for a test report?

FUELSTAT® SOLUTION
TEST. RESULT. REPORT
within 15 minutes

FUEL STORAGE & SUPPLY

- Does your fuel contain dangerous levels of microbial contamination?
- FUELSTAT® can quickly help you find out!

FUELSTAT® is used across many aspects of the Fuel Supply Chain from refinery to wing in the aviation sectors, or to point of use for marine, transportation and power generation sectors for applications such as:

- Regular testing of fuel supply infrastructures such as pipelines, hydrants, holding tanks for jet fuel and diesel supply as per JIG/industry or internal operations guidelines
- Reactive testing of supply infrastructure when microbial contamination is suspected
- Proof of fuel being clear of microbial contamination prior to loading/unloading
- De-fuelling operations on behalf of clients

Tough markets demand efficient processes that are not always visible to clients

In an increasingly litigious environment providing chain of custody proof of fuel quality is becoming increasingly important throughout the fuel supply chain, but rapid, on-site microbiological testing using FUELSTAT® can also have several operational benefits:

- Taking only minutes, not days, provides ability for fast remedial action if necessary
- Treat only what needs treating, helping to reduce overall maintenance costs
- Minimise potential of cross contaminating other assets, thus reducing downtime
- Protection of reputation when used at time of fuel hand over

MICROBIAL CONTAMINATION IN FUEL

If you're a user or supplier of jet or diesel fuels, microbial contamination can pose a serious threat to you and your customers.

Once this microbial contamination starts to develop, it can get out of control quickly. The micro-organisms produce a thick, slimy material called biomass, which clogs engines and stops them from working properly. Biomass can also influence metal corrosion, causing permanent damage to tanks and mechanical parts. If left for a prolonged period of time without treatment, it can cause:

- Rejected fuel deliveries
- Corrosion and tank leakage
- Blocked filters
- Customer increased fuel consumption, blocked injectors and Engine failures

HOW DO YOU MANAGE THE RISKS OF JET AND DIESEL FUEL MICROBIAL CONTAMINATION?

There is no way to completely prevent microbes from entering fuel. These microbes are all around us, in the air and on surfaces, and can enter the fuel in numerous ways once it leaves the refinery. Most importantly, even the well-maintained fuel delivery systems will experience condensation - and when water gets into fuel, microbes do too. If severe microbial contamination is discovered in your fuel, it can be treated with specialist fuel cleansers and biocides. However, this procedure can cost many thousands of dollars and usually requires taking your fuel and generators out of action. To minimise the risks, there are three key activities you need to do:

1. Remove water from tanks
2. Store fuel correctly
3. **Test for fuel microbial contamination regularly...**

THE SOLUTION IS AS SIMPLE AS 1-2-3

FUELSTAT® PLUS

- The ultra-simple test that just requires **4 drops** of sample
- **15 minutes** to result as opposed to 4-7 days!
- **'Test at the tank'** technology - no laboratory required
- No requirement for additional **equipment** or **sterility measures**

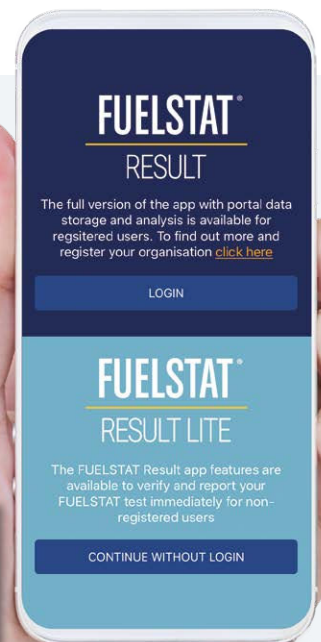

In critical times, you need a fast, convenient testing method - one that doesn't require multiple people to complete the process. Using FUELSTAT®, a single person can conduct tests at the tank after minimal training from our instructional videos. FUELSTAT® is based on immunoassay antibody tests. Just as a pregnancy test searches only for markers of human chorionic gonadotropin, FUELSTAT® only searches for the markers of bacteria and fungi that can grow in jet and diesel fuel and can potentially cause both operational downtime, corrosion and in worse case safety issues.

FUELSTAT® RESULT

- The easy to use app that gives **immediate visual verification** of result
- **Reduces risk** of misinterpretation
- No need for additional equipment other than a smartphone
- Fully **detailed report** can be instantly produced in PDF format

FUELSTAT [®]		ANALYSIS REPORT		:ConidiaBioscience	
This test for microbiological contamination was conducted on a fuel sample using the FUELSTAT [®] Plus test kit in accordance with ASTM D8070 and the results reported below were read using the FUELSTAT [®] Result app.					
TEST DATA					
Tester name:		John Smith	Test date:		01-JAN-2021
Location/Site:		Location 1	Printout date:		01-JAN-2021
Asset Identity:		Asset 1	Phone make:		OnePlus
Tank Reference:		Tank 1	Phone model #:		ONEPLUS A6013
GPS location:		51.41868 -0.56902	App version:		2.0.2
FUELSTAT Test Lot #:		B2101			
TEST RESULT CONTAMINATION ALERT LEVELS			NOTES		
Bacteria:		NEGLECTIBLE	A caution on the Negligible alert levels indicates that reading is getting close to the alert level for Moderate Contamination		
Fungi:		NEGLECTIBLE			
Hormoconis resinac:		NEGLECTIBLE (CAUTION)			
OVERALL RESULT:		NEGLECTIBLE			
DISCLAIMER			RESULT LIMIT INDUSTRY GUIDELINES		
FUELSTAT [®] Result is designed for use with tests which are fully compliant with ASTM D8070. However, readings obtained using FUELSTAT [®] Result are currently outside the scope of ASTM D8070. Operators should visually validate test results as per ASTM D8070. The accuracy of this report may be dependent on the accuracy of the sample provided. Full terms of use available on the website: www.conidia.com For any technical assistance telephone: +44 (0)1491 829102			Phase	Target antigen limits	Alert level
			Fuel	Up to 150 µg/L	NEGLECTIBLE
			Water	Up to 33 µg/ml	
			Fuel	Between 150-750 µg/L	MODERATE
			Water	Between 33-166 µg/ml	
			Fuel	Greater than 750 µg/L	HEAVY
			Water	Greater than 166 µg/ml	

TRIED. TESTED. TRUSTED.

FUELSTAT®

Who we are:

FUELSTAT® fuel tests are developed, manufactured and marketed by Conidia Bioscience Ltd. Based in UK, Conidia Bioscience was founded in the early 2000's by experts in immunoassay techniques and holds the internationally patented intellectual property for FUELSTAT®.

Where to find us:

FUELSTAT® is distributed globally by a network of specialist distributors covering the major sectors. To arrange for a distributor to support you simply contact info@conidia.com.

FUELSTAT® complies with ASTM D8070 and ASTM D6469 Standard Guide for Microbial Contamination in Fuels

FUELSTAT® is listed as a recommended product by IATA. Conidia Bioscience is a Strategic Partner with IATA
